Ventilation DUCT

VENT-FLEX / VENT-FLEX PREMIUM

*We take care
of your home's climate!*

WHAT ARE VENT-FLEX DUCTS USED FOR?

Vent-Flex ducting is used to **transport supply and extract air** in mechanical ventilation systems in residential buildings. The pipe is manufactured in two variants - Vent-Flex and Vent-flex Premium. The inner coating has **anti-fungal and anti-bacterial additives**. Long-term microbiological protection (**efficiency > 99.98%**) is provided by **silver (Ag) and silica (SiO₂) nanoparticles**. The inner layer also has antistatic additives, which reduces the possession and accumulation of dust. The double-layered pipe is characterised by its high flexibility, allowing a very versatile distribution of the ventilation system. The pipe's construction provides high strength, which makes it possible, for example, to pour concrete.

	VENT-FLEX	VENT-FLEX PREMIUM	VENT-FLEX on request
VENT-FLEX duct			
type	STANDARD	PREMIUM	VENT-FLEX on request
colour	blue	green	other colours
inner sheath	white	grey	on request
diameter	Ø63 Ø75 Ø90	Ø63 Ø75 Ø90	Ø63 Ø75 Ø90
antimicrobial coating with nanosilver	YES	YES	on order
antistatic coating	NO	YES	on order
UV stabiliser	NO	YES	on order
warranty	15 years	15 years	in accordance with specifications
PZH attestation	YES	YES	in accordance with specifications
quantity per roll	roll 50m	roll 50m	logistic minimum 240 rolls of 50m

IMPORTANT!

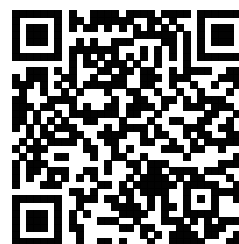

Ensure that your ventilation ducts are of the highest quality to ensure long-lasting usability and the best air quality.

Frequent duct replacement can be quite cumbersome and costly due to the placement of the entire installation in the ceiling or floor. Choose **Vent-flex** or **Vent-flex Premium** ducts
